

# I-41 Project: Noise Barriers

At the start of the I-41 Project, the Wisconsin Department of Transportation (WisDOT) determined noise impacts and evaluated possible mitigation measures, such as noise barriers. After careful evaluation, WisDOT is installing noise barriers to minimize noise impacts along segments of the I-41 mainline.

Noise barriers are being constructed along segments of I-41 between the WIS 172 and Mason Street interchanges as shown on the map to the right.

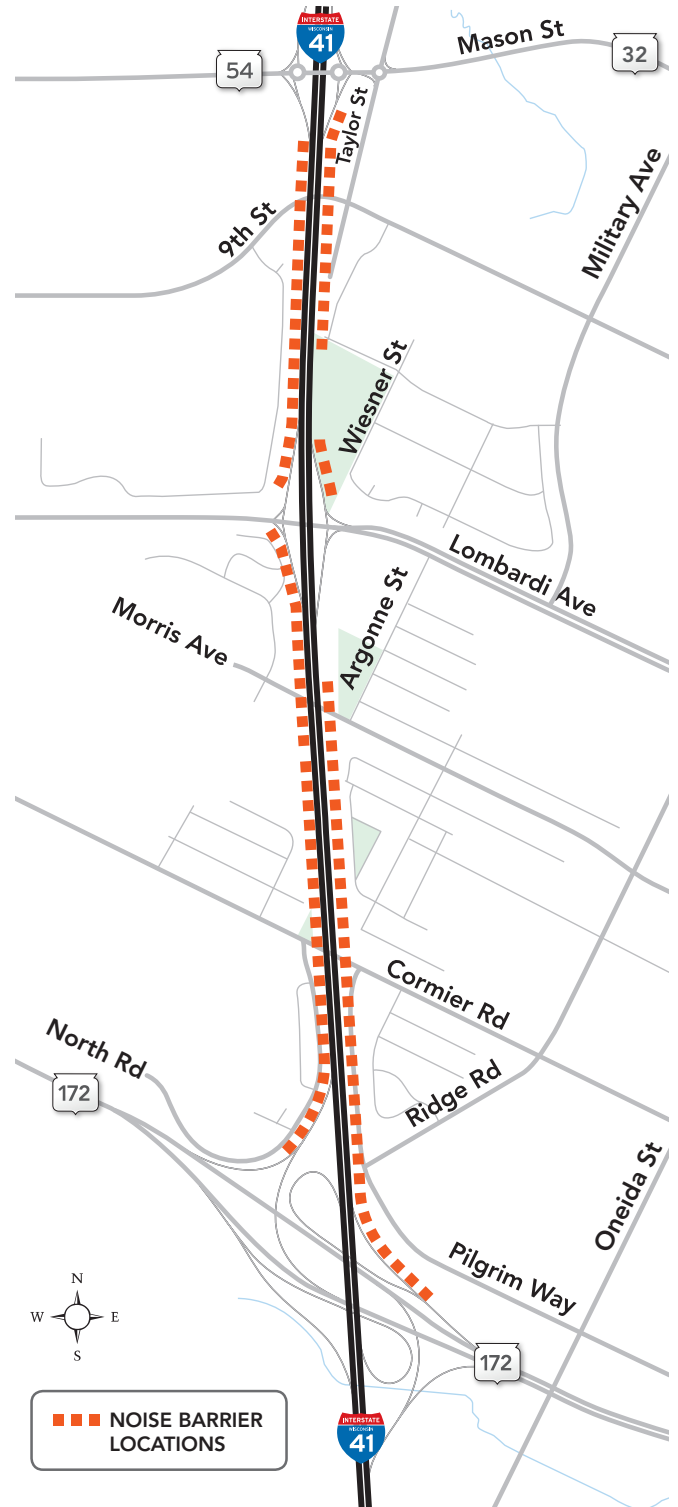

### WisDOT Noise Policy

Additional information is provided in the WisDOT brochure *Noise Barriers: What You Should Know*, available on the I-41 Project website. This is a compilation of frequently asked questions about noise barriers to help you understand:

- WisDOT's policy for installing noise barriers
- How adjacent landowners and residents are involved in the noise barrier process

Planned noise barriers along I-41 mainline

### NOISE BARRIER CONSTRUCTION SCHEDULE

**2014** - Began noise barrier construction in limited areas

**2015** - Construct most of the noise barriers along I-41

**2016** - Complete any remaining noise barrier construction

2015-10-16
